# **MODULE CONTENT**

#### Summary module description

This course serves as a quantitative introduction to the principles of Hydraulics and its applications in industrial and engineering problems. The course covers the fundamentals of hydraulics, including water flows in closed and open channels, and losses in piping systems. Additional topics to be covered include hydraulic machinery such as pumps and turbines, measurement of flow, and the design of hydraulic structures. network project with software application of network analysis and design (EPANET, WATERCAD).

# AIMS

Hydraulic engineering, as a sub-discipline of civil engineering, is concerned with the flow and conveyance of fluids. This course consists of the topic like viscous fluid flow, laminar and turbulent flow, boundary layer analysis, dimensional analysis, open channel flows, flow through pipes, and computational fluid dynamics. The objective of this course is to introduce various hydraulic engineering problems like open channel flows and hydraulic machines. In addition this course is a compulsory part of AICTE Civil Engineering curricula

#### LEARNING OUTCOMES

- State the basic concepts of hydraulic engineering and its application in practice
- Describe the laminar and turbulent flow
- Describe and identify the fundamental of closed-conduit flow and its applications.
- Describe and identify the fundamental of open channel flow and its applications.
- Use Hazen-Williams Formula in pipe flow related problems.
- Calculate the expected flow rates in pipes and open channels.
- Differentiate between the uniform and nonuniform flow concepts and their applications.
- Apply the concept of dimensional analysis in hydraulic engineering.
- Model hydraulic engineering problems using dimensional analysis.
- Perform basic design calculations.
- Demonstrate the application of turbines and pumps and choose the appropriate pumps for water supply.
- Design and analysis of hydraulic sections of open channels
- Illustrate the hydraulic jump phenomenon.
- Analysis the pipe in parallel, series and pipe networks.
- Ability to use the techniques, skills, and modern engineering tools necessary for hydraulic system practices
- Synthesize information and ideas in relation to issues relating to water system design (e.g. assumptions, design criteria, reliability)
- Demonstrate effective team membership, including the development of written, oral and listening skills

| LEARNING AND TEACHING STRATEGIES |            |             |  |  |

| Total                           |                 |                                |

#### WORKLOAD

The information below is provided as a guide to assist students in engaging appropriately with the course requirements. Please note that, in general, for each formal contact hour, it is expected that a minimum of 2 additional hours of independent study are undertaken. The following table shows an estimate of students' workload:

| Work Type (Activities)  | Quantity | Duration<br>(Hrs.) | Total (Hrs.) |
|---|----------|--------------------|--------------|
| Wider reading (independent)   |          |                    |              |
| Wider reading (directed)  |          |                    |              |
| Exam revision / preparation   |          |                    |              |
| Peer assisted learning  |          |                    |              |
| Advances preparation for classes  |          |                    |              |
| Preparation for tutorials   |          |                    |              |
| Preparation for presentations   |          |                    |              |
| Preparation for seminars  |          |                    |              |
| Preparation for performance   |          |                    |              |
| Preparation of practical report   |          |                    |              |
| Completion of formative assessment tasks  |          |                    |              |
| Revision and preparation for in-class or end of module examination                                |          |                    |              |
| Group study tasks   |          |                    |              |
| Carry-out research project  |          |                    |              |
| Dissertation writing  |          |                    |              |
| Essay preparation – may include conducting research, analyzing data, editing the finished product |          |                    |              |
| Reflection – for example, lecture consolidation or engaging with feedback                         |          |                    |              |
| Total hours by term   |          |                    |              |
| Module total hours  |          |                    |              |
|   |          |                    |              |

| ECTS allocated based on student workload by the course description |          |                    |                          |  |

**Participation :** Come to class on time. Class attendance is in accordance with the published university course schedule. **Attendance to class is required** and comprises a portion of your final grade.

**Quizzes** will be periodically administered to keep a record of your participation and preparedness. Any absence should be coordinated before the absence, if possible.

**Homework Assignments:** Daily homework will be due at the beginning of the next class after it is assigned unless otherwise noted in class. All homework assignments should be turned in before class begins. Work turned in late will be penalized in increments of 10% per day. Work will not be accepted beyond two days late without special coordination affected prior to the due date.

Academic Integrity: The engineering profession does not need, and should not tolerate, dishonesty. Students are required to be familiar with and abide by the University's Academic Integrity Policy. Students may consult with each other about homework assignments. However, each student is responsible for understanding the principles behind the correct homework solution (not just the correct answer). Cheating (e.g. copying other students' work) on homework assignments will NOT be tolerated. Violations will be dealt with immediately and severely in accordance with the university policies.

Term Project:

Some possible general topics for projects:

# CLASSROOM CODE OF CONDUCT

All students have the right to learn without interference from others. Instructors have the authority to protect this right by creating and maintaining an environment that is conducive to learning. Meanwhile, students are required and expected to conduct themselves in a safe, mature and considerate manner. Students should conduct and express themselves in a way that is respectful to all individuals. This includes respecting the rights of others to comment and participate fully in class. Classroom misconduct is any behavior which disrupts or interferes with the learning environment.

# STUDENT RESPONSIBILITIES

- 1. Don't read a newspaper or other document; don't sleep during class; don't hold side conversations with your neighbor(s); and don't check your email, update your Facebook page, or tweet in class. Remember, you may be called upon to answer a question and if you are not prepared, you will not be given credit for attending that class. This is a participative course.
- 2. Attend all classes unless an emergency arises. If that occurs, please let me know by email or in person. Remember, the quizzes are based on class discussions. Unexcused absences from the midterm may lead to a grade of zero for that assignment.
- 3. Do your own work. Cheating will not be tolerated. It is unfair to students who work diligently to get the best grade possible in this module.
- 4. Using cell phones or other electronic devices that disrupt the learning process or teaching environment is prohibited.
- 5. Be a contributing member of your group. Don't let others carry the load for you. The business world revolves around teamwork and a consultative approach to problem solving. This is what I expect of you in class discussions whenever I break you up into groups.
- 6. If you violate any of these rules, I may ask you to leave class for the day. I don't want to embarrass anyone but I expect to have your respect and attention throughout the module.

# **INSTRUCTOR (MY) RESPONSIBILITIES**

- 1. Model ethical behavior in the classroom and during office hours and in out-of-class discussions.
- 2. Be respectful towards all students; not to talk down to you.
- 3. Be diligent and provide interesting and informative lectures and discussions that challenge your intellectual curiosity.
- 4. Provide a diverse learning experience including using social media and Internet research in class discussions and assignments.
- 5. Be available during office hours and, when necessary, at other times during the course.

Be attentive to your questions and concerns. Feel free to see me if you have a personal issue related to the course that you think I should know about. I do care about your well-being and hope to contribute towards your growth as a person. All of our communication about such matters is on a confidential basis.

- 6. Assist you in any way that I can to help you learn the course material. This includes meeting outside of office hours at a mutually convenient time and place.
- 7. Be fair in the grading process including grading quizzes, examinations, term papers, and the group case presentation. My evaluation of your work and grading process simulates the way performance evaluations should be done in the business world. I view the classroom as a learning laboratory to get you ready to be contributing members of society.
- 8. Be diligent in returning work with a grade and, where appropriate, my explanations of why points were deducted from your grade. See me if you have any questions on your grade but first review my comments to better understand why points have been deducted.
