Course Book

<p>Course Description</p>	<p>This course, which consists of (2) hours theoretical lecture & (2) hours laboratory practices per week, provides an overview of medically important bacterial species. Emphasis is placed upon their morphological and physiological characteristics, classification & their relationship to human health and infections. Practical lessons will endeavor to provide the student with the most comprehensive experiences on standard methods used to identify various bacterial species.</p>			
<p>Course objectives</p>	<p>This course is prepared to provide a comprehensive understanding about the medically significant bacterial species and the routine identification methods used in medical laboratories. As well as the principles behind antibacterial chemotherapies.</p>			
<p>Student's obligation</p>	<p>The role of students and their obligations throughout the academic year are:</p> <ul style="list-style-type: none"> • Preparing for class (attendance, quizzes, reports, seminars and exams). • Willing to work hard to complete course activities. • Willing to bring their life experiences into the class to enrich discussions. • Matching deadlines for submitting their homeworks and other assignments.

Specific learning outcome:	At the conclusion of this course the student should be able to demonstrate the following outcomes:			
	<ol style="list-style-type: none"> 1. Demonstrate an understanding of the basic concepts of bacteriology including terminology. 2. Demonstrate an understanding of the characteristics of various bacterial species. 3. Organize a bacterial identification system. 4. Identify bacterial species commonly noted in medical laboratories. 5. Demonstrate basic laboratory skills for diagnosis of different bacterial species.

Questions Example Design

1. Multiple choices
2. Compositional questions:
 - What ?
 - How ?
 - Why ?
3. Open-end: Fill in the blanks
4. Enumeration
5. True and false: Answer True (T) or False (F) about each of the following statements & correct the false statements
