Module (Course Syllabus) Catalogue

2022-2023

College/ Institute	Erbil Medical Technical Institute			
Department	MLT Department			
Module Name	Histopathological techniques			
Module Code	Histopathological techniques			
Degree	Technical Diploma Bachler			
		Master PhD		
Semester	2rd			
Qualification	Master degree			
Scientific Title	Lecturer			
ECTS (Credits)	6			
Module type	Prerequisite Core Assist.			
Weekly hours	4			
Weekly hours	(2)hr Class	(3) Total hrs Workload		
(Theory)				
Weekly hours	(2)hr Class	(1) Total hrs Workload		
(Practical)				
Number of Weeks	16			
Lecturer (Theory)	Mustafa Hamadamin Rasool			
E-Mail & Mobile NO.	m.mustafa@epu.edu.iq			
Lecturer (Practical)				
E-Mail & Mobile NO.	009647504554437			
Websites	https://academicstaff.epu.edu.iq/faculty/m.mustafa			

Course Book

Course Description	 This course which consists of (2) hours lecture & (2) hrs lab. per week for (12) weeks, is an introduction to Histology and Histolopatholoy and Preparing microscopical slides from body fluids and tissues. 			
Course objectives	The purpose of this course is to introd techniques , exfoliative cytology & their of (histological specimens) from human & a speciemens & the difference between the At the conclusion of this course the st through written examinations, quizzes achievements: 1. Demonstrate and understanding 2. Explaining of the histopathologi 3. Demonstrate basic laboratory sl	liagnostic sig nimals and D em. udent shoul , and oral di g of basic his cal processe	nificance, efinition o d be able iscussion stopathol	also how to obtain of (biopsy) & (autopsy) to demonstrate the following ogical techniques.
Student's obligation	The students should be attendance and complete of all tests, exams and assignments			
Required Learning Materials	lecture halls with data show equipment for lecture presentations, white board, overhead projector, posters			
Evaluation	Task	Weight (Marks)	Due Week	Relevant Learning Outcome

	Paper Review		1	1	
	Assignments	Homework	0.5	4	
		Class Activity	2	2	
		Report	1	1	
		Seminar	1	1	
	nts	Essay	0	0	
		Project	0	0	
	Quiz		1	4	
	Lab.		2	12	
	Midterm Exam		1	2	
	Final Exam		1	3	
Specific learning outcome:	 Specific learning outcome: On successful completion of this program, graduates will be able to Identify evaluate and apply major theoretical traditions in human histology Understand how the slides are prepared from different tissues and fluids in the body. Could be able to prepare all working solutions. Preservation and fixation of all histological specimens. Techniques for medical museum. Personal safety. 				
	Handbook of Histopathological and Histochemical Techniques (including museum techniques) THIRD EDITION C. F. A. CULLING Microtomy and Paraffin Section Preparation by Scientia.				

Course topics (Theory)	Week	Learning Outcome
Definitions of (histological techniques) (exfoliative cytology) & their diagnostic significance.Definition of (Microtechnique)(histology)(cytology)& understanding the difference between these sciences& microtechnique.	10/2/202 0	Able to knowing the general principle of cells, tissue, organs
How to obtain (histological specimens) from human & animals. Definition of (biopsy) & (autopsy) & the difference between them.	17/2/202 0	Be able to knowing all the types of methods in transporting material across the biological membrane
The steps of preparation of histological slides& the name of each step Fixation: definition, purpose, classification of fixatives, & types of fixatives like: 1-10% formalin 2-Neutral buffered formalin 3- formol saline 4-bouin 's solution 5-Zenker 's solution c 6- Helly' s & Carnoy's solutions With the advantages & disadvantages of each solution.	24/2/202 0	Must be able to knowing all the part of the system and its functions
 -The process of (washing) the specimens. Definition, aim, the solutions used & the time. -Dehydration: definition, aim, the solutions used, & the time. - Clearing: definition, aim, solutions used, characteristics of clearing solutions, & the factors affecting this process 	2/3/2020	Be able to knowing all types of blood cells and their functions
 Infiltration (impregnation): definition, aim, substances used, types of paraffin wax& the factors affecting the process. Sectioning: microtome, types(rotary, freezing, ultramicrotome),the difference in mechanism & uses 	9/3/2020	Be able to know every parts of muscle system part and their functions

for each		
 Substances used to support the tissue during sectioning, section thickness, and type of fixative & other differences. -Common errors during sectioning, causes & the solution. 	16/3/202 0	Be able to know every parts of nervous system part and their functions
- Staining: definition, aim, and classification of stains, staining theory depending on their chemical reactions, origin, methods of staining (direct & indirect staining).	23/3/202 0	Be able to know every parts of renal system part and their functions
 Stain solvents, factors affecting staining process, storage,& the choice of appropriate stain Definitions of: mordant, accelerator, counter stain, differentiation, Bleaching, basophilic stain, acidophilic stain, metachromasia. 	30/3/202 0	Be able to know every parts of Respiratory system part and their functions
 Routine stains: definition, aim, examples like hematoxylin & eosin. Common types of hematoxylin & method of preparation. Exfoliative cytology: definition, uses, important diagnostic application. 	6/4/2020	Be able to know every parts of Gastrointestinal system part and their functions
General features of normal cells, malignant cells, effect of inflammation on cellular morphology. The stain used for exfoliative cytology	13/4/202 0	Be able to know every parts of Reproductive system part and their functions
Obtaining samples for cytological examination, fixation, and preparation of smears for detection of malignant cells.	20/4/202 0	Be able to know every parts of Sensory organs part and their functions
Detection of common errors in the work, & how to correct these errors.	27/4 /2020	

- Practical Topics (If there is any)	Week	Learning Outcome
 Introduction about: the techniques about the preparation of microscopical slide for histological & cytological examination the role of laboratory technologists the equipments required Preparation of different concentration of alcohol & other solutions whether Vol/Vol or Weigh / Vol. Definition of each step of tissue preparation & the solution required for each step. 	11/2/202 0	Be able to knowing all parts and their functions and how to use of microscope
Preparation of tissue samples (formalin fixed) for the students & perform: fixation, dehydration, clearing and infilteration. Embedding (blocking), trimming and mentioning all materials used in this step.	18/2/202 0	Be able how to draw blood sample
Sectioning: definition, purpose with detail explanation for the rotary microtome. Common errors during the process of sectioning, causes and how to be avoided.	25/2/202 0	Be able how to make a blood smear and detection of different types of blood sample in it
Mounting of tissue sections on glass slide. Definition, procedure and materials used.	3/3/2020	Be able to know how blood can be estimate
Staining tissue sections with routine stains (hematoxylin & eosin) Procedure of staining& preparation of staining solutions Student should preparet two slides for microscopical examination .Methods of cleaning slides from residual stains &solution & mounting media(Canada balsam)from edges of slide cover	10/3/202 0	Being able to know how to detection the types of blood group
Preparation of tissue sections fixed in Zenker solution & Bouin's solution(note the color difference between them) Staining tissue sections by (special stains)	17/3/202 0	Be able to practice on how can determination the ration of the PCV
Use Hematoxylin & Eosin to stain bone tissue. Compare results with Schmorl's stain.	24/3/202 0	Be able to knowing how to detect the rate of bleeding and clotting rate

Cervical smear (pap smear) Specimen collection, fixative used, procedure & staining, results(normal or pathological)	31/3/202 0	Be able how to detect blood pressure and thermal detection
Normal cells, effect of inflammation on cell morphology, precancerous & cancerous changes.		
Sputum smear	7/4/2020	. ,
Specimen collection, fixative used, procedure & staining		the lung
Compare normal & abnormal cells		
Preparation of smears for serous fluids.	14/4/202	Be able to count RBC on microscope slide
Specimen collection, fixative used, procedure & staining	0	
Examination of the smear		
Preparation of urine smears.	21/4/202	Be able to count WBC on microscope slide
Specimen collection, fixative used, procedure & staining	0	
Examination of the smear		
Aspiration cytology, definition and uses.	28/4	Be able to estimate the rate of E.S.R
Preparation of smear for aspiration samples from breast, lymph	/2020	
nodes, and thyroid glands.		
Hospital visit to see the preparation of these samples		

a- Examinations (question design):

b- Fill in the blanks:

- c- Samples fixed in formalin must be washed with
- d- Parrafin wax embedded tissue knives are made of

Why?

- 1- It is necessary to cut and preserve sections from a tissue or specific area?
- 2- Cover slipping is done?
