

Module (Course Syllabus) Catalogue 2022-2023

College/ Institute	Erbil Technical Health		
Department	Physiotherapy		
Module Name	Physics of the human body		
Module Code	BIP206		
Semester	2 nd		
Credits	ECTS	3	
Module type	Prerequisite	Core	Assist.
Weekly hours	2		
Weekly hours (Theory)	(2)hrs Class		()hr Workload
Weekly hours (Practical)	(0)hrs Class		(0)hr Workload
Lecturer (Theory)	Dr. Karim Miss. Nawroz Ismael		
E-Mail & Mobile NO.			
Lecturer (Practical)			
E-Mail & Mobile NO.			

Course Book

Course Description	<p>This course provides an introduction to human anatomy and body systems. The laws of physics explain several bodily functions, including the mechanics of muscles and body movements, fluid mechanics of blood and air flow, hearing and acoustic properties of the ears, vision optics, heat and energy, acoustics, and electrical signaling. The effects of various environmental phenomena on the body are explored and include discussions on the body's behavior in a low-gravity environment (e.g. in space).</p>
---------------------------	---

<p>Course objectives</p>	<ul style="list-style-type: none"> • apply conservation of energy arguments to solving some biomechanical problems. • Can explain how the relationship between someone's centre of gravity and base of support can be used to understand their stability. • Describe some aspects of control engineering applied to the human body. • Predict how heat is generated and lost by the human body in different circumstances. • Explain how the body responds to hot and cold conditions. • Choose appropriate methods of measuring physiological temperatures. • Describe the physical operation of sensory systems. • Identify common problems in nerve system and how these are mitigated. • Explain how pressure, volume and flow relate to each other in the human body. • Describe the electricity of the brain and heart.
<p>Student's obligation</p>	<ul style="list-style-type: none"> • Students should attend the lectures • Students should take all exams, including daily quizzes and practical exam
<p>Required Learning Materials</p>	<ul style="list-style-type: none"> • Theory: lecture halls with computer equipment for lecture presentations, whiteboard.

Assessment scheme																																				
Specific learning outcome:	<p>At the end of the course, the students should be able to:</p> <ul style="list-style-type: none"> • To give students an introduction to the physics of the human body. • describe the musculoskeletal and cardiovascular systems of the human body • apply the principles of physics to explain the biomechanics of the body • analyses the electrical conduction system of the nerves, the brain and the heart • explain how physics influences the functions of the visual and auditory system • solve basic conceptual and numerical problems of the human body related to energy, work, acceleration, forces, electricity, magnetism, sound, optics and modern physics • describe the effects of space flight and microgravity on the human body

Course topics (Theory)		Week	Learning Outcome
Week	Outline	No. of Hours	
		Theory	
1.	• Terminology, modelling, and measurement	2	
2	• Energy, heat, Body temperature. And Loss of body heat.	2	
3	• Conservation of energy and heat flow. Regulation of temperature and control of blood pressure.	2	
4	• work, and power of the body	2	
5	• Muscle, forces and Physics of the skeleton	2	
6	• Basic physics of pressure and flow of fluids. Characteristic pressures in the body		
7	• Physics of the lungs and breathing	2	
8	• Physics of the cardiovascular system	2	
9	• Electrical signals from the body. Electrical properties and signals of the heart and the brain	2	
10	• Nerve conduction.	2	
11	• Human body in space and microgravity	2	
12	• Physics of the circulation system.	2	
13	• Modelling the circulatory system and the heart.	2	
14	• The physics of sound waves. Sound and speech, Speech production.	2	
15	• Hearing and other vibrations in the body.	2	
	.
