Course Book

| | | | | | |
|---|---|-----------------|------------------------------|------------------------|---|
| <p>Course Description</p> | <p>The course focuses on analyzing different engineering problems and examining various aspects of the problem through focusing on each component through a holistic approach that recombines the different elements of the problem back into an integrated problem. Fundamentals of Fluid mechanics are learned through real life problem solving and they are set as basis for solving open ended questions.</p> <p>Additionally, this course is to understand fundamentals of engineering hydrology. It is the study of water in all its forms (rain, snow and water on the earth's surface), and from its origins to all its destinations on the earth. The study of hydrology that concerned mainly with engineering applications is known as applied hydrology. Engineering Hydrology deals with estimation of water resources, the study of processes such as runoff, precipitation and their interaction, the study of problems such as Floods, Droughts and strategies to overcome them.</p> | | | | |
| <p>Course objectives</p> | <ul style="list-style-type: none"> • To familiarize the student basic principles and equations of fluid mechanics and show their application real life engineering example. • To give the students the correct intuition when comes to Fluids and their application • The student uses fundamentals of math needed for solving complicated problems • Brain storming on open ended problems and using learned method to get educated approximation for solving them. • The course will focus on explaining the background of Applied hydrology, • The application of hydrology in different engineering structures. | | | | |
| <p>Student's obligation</p> | <p>Students should attend in all the lectures except what is allowed by university regulations. They should attend quizzes, exams and do their homework, this is in addition to the assignments which can carry considerable credits.</p> | | | | |
| <p>Required Learning Materials</p> | <p>All the lectures will be given with the aid of projector, using PowerPoint presentations. Students will have access to the handouts.</p> | | | | |
| <p>Evaluation</p> | <p>Task</p> | | <p>Weight (Marks)</p> | <p>Due Week</p> | <p>Relevant Learning Outcome</p> |
| | <p>Paper Review</p> | | | | |
| | <p>▷</p> | <p>Homework</p> | <p>14</p> | | |

| | | | | |
|---|--|-------------|--|--|
| | Class Activity | 2 | | |
| | Report | 8 | | |
| | Seminar | 8 | | |
| | Essay | | | |
| | Project | 8 | | |
| | Quiz | 2 | | |
| | Lab. | 0 | | |
| | Midterm Exam | 16 | | |
| | Final Exam | 40 | | |
| | Total | 100 | | |
| Specific learning outcome: | <p>After successful completion of the course, students are expected to have:</p> <ol style="list-style-type: none"> 1. understand the basic concepts of Fluid Mechanics (Recognize the various types of fluid flow problems encountered in practice.) 2. understand how the main concept of the Fluid Mechanics and Hydrology is used in the Civil Engineering (Water, Drainage and Sewerage) 3. model engineering problems and solve them in a systematic manner. 4. a working knowledge of accuracy, precision, and significant digits, and recognize the importance of dimensional homogeneity in engineering calculations. | | | |

| Course topics (Theory) | | Week | Learning Outcome | |
| 1.1 Introduction 1.2 Properties of fluids 1.2.1 Density and volume 1.2.2 Viscosity 1.2.3 Thermodynamic properties | | 2 | They will understand the main concept of the Fluid Mechanics _ | |

| | | |
|---|---|---|
| 1.2.4 Compressibility and bulk Modulus 1.2.5 Surface Tension and capillarity 1.2.6 Vapour pressure and cavitation | | properties of fluids |
| 2.1 Fluid pressure at a point 2.2 Pascal's law 2.3 Pressure variation a fluid at rest 2.4 Measurement of pressure 2.5 Simple nanometers 2.6 Differential Manometers | 2 | They will understand the main concept of the Pressure and its measurement (Fluid Statics) |
| 3.1 Introduction 3.2 Bouncy 3.3 Center of Bounce 3.4 Meta-centric height 3.5 Analytical Method for meta-center Height 3.6 Conditions of Equilibrium of a floating and sub-merged body 3.7 Experimental method of determination of Meta-centric height | 2 | They will understand the main concept of the Buoyancy and floatation |
| 4.1 Introduction 4.2 Methods of describing fluid motion 4.3 Type of fluid flow 4.4 Rate of flow or discharge 4.5 Continuity Equation 4.6 Continuity equation in three dimensions 4.7 Velocity and acceleration 4.8 Velocity potential function and stream function | 1 | They will understand the main concept of the Kinematics of flow and ideal flow |
| 5.1 Introduction 5.2 Equation of Motion 5.3 Euler's equation of motion 5.4 Bernoulli's equation form Euler's equation 5.5 Assumptions 5.6 Bernoulli's Equation for real fluid 5.7 Practical applications of Bernoulli's equation 5.8 The Momentum Equation 5.9 Kinetic energy correction factor | 1 | They will understand the main concept of the Dynamics of fluid flow |
| 6.0 Fundamentals of Engineering Hydrology 6.1 introduction to hydrology 6.2 Domain and objective of Engineering hydrology 6.3 Practical applications of hydrology 6.3.1 Hydraulic structures | 4 | They will understand fundamentals of engineering hydrology |

| | | |
|--|--|--|
| <p>6.3.2 Water supply</p> <p>6.3.3 Wastewater treatment and disposal</p> <p>6.3.4 Irrigation</p> <p>6.3.5 Drainage</p> <p>6.3.6 Hydropower generation</p> <p>6.3.7 Flood control</p> <p>6.3.8 Navigation</p> <p>6.3.9 Erosion and sediment control</p> <p>6.3.10 Salinity control</p> <p>6.3.11 Pollution abatement</p> <p>6.3.12 Recreational use of water</p> <p>6.3.13 Fish and wildlife protection</p> <p>6.4 Hydrologic cycle</p> <p>6.5. Steps of the Hydrologic Cycle</p> <p>6.6 Measurement techniques</p> <p>6.7 Estimated world water quantities</p> <p>6.8 Hydrologic budget in details</p> <p>1 week</p> <p>6.9 Test for consistency of record</p> <p>6.10 Analysis of Precipitation Records</p> <p>6.10.1 Precipitation depth</p> <p>6.10.2 Precipitation intensity</p> <p>6.10.3 Computation of Average Rainfall Depth over a Basin</p> <p>6.10.3.1 Arithmetic Average Method</p> <p>6.10.3.2 Thiessen Polygon Method</p> <p>1 week</p> <p>6.11 Analysis of Evaporation losses</p> <p>6.11.1 Factors affecting evaporation</p> <p>6.11.1.1 Meteorological Data:</p> <p>6.11.1.2 Type of Surface:</p> <p>6.11.1.3 Water Quality:</p> <p>6.11.2 Measurement or estimation of evaporation</p> <p>6.11.2.1 Water budget method</p> <p>6.11.2.2 Empirical formulae</p> <p>6.11.2.3 Energy budget method</p> <p>6.11.2.4 Mass transfer method</p> <p>6.11.2.5 Actual observations</p> <p>6.11.2.6 Pan observations</p> <p>2 weeks</p> | | |

| Practical Topics | Week | Learning Outcome |
|--|------|------------------|
| None | None | None |
| <p>Questions Example Design</p> <p>Solving Problems Such as solve, derive, find, determine, ... etc.</p> <p>Explanations and graphing Such as explain, why, show that, prove that ..., etc.</p> <p>Number of Questions: 3-6 Number of Assignments: 2-4</p> <p>Recommendations for Students at Exams</p> <ul style="list-style-type: none"> • Read the questions carefully and at least twice. • Think about the answers and don't hurry. <p>Answer the questions with the easiest first At the end, review the answers.</p> | | |
| <p>Extra notes:</p> <p>For the above time schedule, 12 weeks of teaching is considered, hence, the completion of the program is dependent on the available number of weeks. However, some changes might happen to optimize the available time.</p> | | |
| <p>External Evaluator</p> <p>I hereby confirm that all syllabuses given in the attached course book is sufficient to cover required subjects, areas and titles needed for students regarding the study year.</p>  <p>Ahmed Suad Ali: Head of QA/QC committee of Highway and Bridges Engineering Department 2019-2020/2020-2021/2021-2022</p> | | |
