Course Book

Course Description	This course offers lecture, laboratory, and online interaction to provide a foundation in data management concepts and database systems. It includes representing information with the relational database model, manipulating data with an interactive query language (SQL) and database programming, database development including internet applications, and database security, integrity and privacy issues.	
	This course gives students opportunity fundaments concept of data modeling. Design and applications development are explained in simple language which is easy to understand an implement.	
	In its simplest form, a database is a collection of information organized into a list. Whenever you may A database program, however, is much more powerful than a simple list you keep on paper or in a Microsoft Word document. A database program lets you:	
Course objectives	 Store Information: A database stores lists of information that are related to a particular subject or purpose. 	
	 Find Information: You can easily and instantly locate information stored in a database. 	
	 Analyse and Print Information: You can perform calculations on information in a database. 	
	 Manage Information: Databases make it easy to work with and manage huge amounts of information. 	
	 Share Information: Most database programs (including Microsoft Access) allow more than one user to view and 	

		work with the	same informa	ation at once	
Student's obligation	Missed classes will not be compensated including the quizzes and the scheduled assignments. The students will lose marks on unattended classes with quizzes unless a legal document or authorized leave is presented which should explain the excuse of the absence. However, the absent student should take the .responsibility for making up the missed lecture				
Required Learning Materials	Power point slides use in the class including pictures and experimental images, and in some points also white board uses to explain module stuffs in more detail. The lectures are divided into four weekly hours. Mainly, the first two hours will be dedicated for the topic backgrounds and the main principles. Notes and handouts are given to the students containing the detail of the topics. This will be assisted by presentations using word and/or power point slides during the lecture. Discussion time is provided for the students for questions. The second part of the week Practical.				
		Task	Weight (Marks)	Due Week	Relevant Learning Outcome
Evaluation	Assignments Qui Lab	lterm Exam al Exam	%10 %2 %14 %14 %14 %16 %40 %100		
Specific learning outcome:	 Install, configure, and interact with a relational database management system; Describe, define and apply the major components of the relational database model to database design; Learn and apply the Structured Query Language (SQL) 				

Course References:	for database definition a Utilize a database mode class, a one-to-one (1:1) entity classes, a one-to-n between entity classes, a relationship between en relationships; Define, develop and pro M:M database tables; Learn and implement th information integrity, se Apply ethical computing database design and imp 1- Fundamentals of Data mode (Prof.(Dr).s.p.s.Saini). 2- Master SQL fundamentals Le Publisher: O'Reilly Media, In 3- برمجيات الجاهزة مهارات الحاسوب (microsoft Access 2010 Stude Salford 5- http://training.health.ufl.ed 6- http://www.cse.ucsc.ed 7- http://www.dbbook.com	ling techr relations many (1:N a many-to tity classo cess singl cess singl curity and concepts <u>plementa</u> lling design earning SQI c. earning SQI c. الحاسوب والا ent Edition	hique for a single entity hip between A) relationship o-many (M:M) es, and recursive e entity, 1:1, 1:M, and es and concepts of d confidentiality; and practices to tion. n and Application - (Alan Beaulieu) - Computer Skills (د. محمد بلال
Course topics (Theor	y)	Week	Learning Outcome
Design a report		3	
Macro		2	
Module		1	
Data Page		1	
SQL		3	
Project		2	
Practical Topics		Week	Learning Outcome
Design a report		2	Generate a Report.Auto ReportReport Wizard

	Design View
	Work With Reports
Macro	 Create an Autoexec macro to open the Switchboard on file open. Create a macro to open a table as read-only. Create a conditional macro that runs automatically - create a conditional macro that changes the color of the Gender field based on whether the person is female: Create a simple message box that gives a warning message.
Module	 Create a module Define the function in the module Call functions from forms and reports.
Data Page	 Define and uses of data page
SQL	 Define SQL Language Use SQL commands
Project	 Create some projects and analysis different ideas
Questions Example Design 1. Defile the following items briefly: 1. Database 2.Primary Key 3.Normalazaition	

2. True or false type of exams:

In this type of exam a short sentence about a specific subject will be provided, and then students will comment on the trueness or falseness of this particular sentence. Examples should be provided.

3. Multiple choices:

In this type of exam there will be a number of phrases next or below a statement, students will match the correct phrase. Examples should be provided.

EXAMPLE/

Controlling Data Redundancy in database is _____.
 A)- Disadvantage B)- Advantage C)- none

Answer/ B

4. Explain the following items briefly:

- 1. What is the difference between file system and database?
- 2. Enumerate four (4) disadvantages of file system.

Q/ Create a database system for Student Registration in High schools.

Students

Classes	Schools

shid sname address cid classname Sid Fullname Gender Class(FK) School(FK) Bayan Jameia 1 Class-1 1 Karwan Male Class-1 Dldar 1 2 Didar Azadi Class-2 2 Class-1 2 Sava Female Bawaji 3 Bawaji Grdi 3 Class-3 3 Sozan Female Class-2 Mashkhal 4 Mashkhal Iskan Class-4 4 Abas Male Class-1 Dldar 4

Requirements:

- Create all the tables shown above and make relationship between them using Lookup Wizard. (Note: Gender also should be lookup) (7 marks)
- 2- Create the following quires (8 marks):
 - a. Student numbers in each school
 - b. Show students information where school name is Dldar.
 - c. Show student information by parameter using Gender field.
 - d. Number of Female student in each class.
